

REMOTEGARDS™

When you think of germ-ridden spots in your facilities, schools, businesses etc, places like the restroom come to mind. But if you have a television on sight, your T.V. remote-control is the winner in germ-collecting and a culprit full of bacteria. Studies over the years have shown that when it comes to bacteria lurking on your channel changer, 81% of the samples contain fecal matter and harmful bacteria. These handheld electronic devices are sometimes challenging to clean with the nooks and crannies in between the buttons.

Studies have shown what's living on your remote control.

They include:

- E. Coli
- Streptococcus
- Staphylococcus

WECARE

Your remote control is a major germ hub. Remote controls encounter several hands by previous employees and patrons, that have probably sneezed and coughed numerous times a day. Besides the unpleasant thought of sticky, germ-ridden hands, you need to remember the control has bounced around and fallen on the dirty floor. With the recent COVID-19 pandemic, we are becoming more aware of our surroundings and the everyday items we use. Cleanliness of the items in your place of business, fitness center or work, etc. will become more important and will be part of your mindset the next time you touch that remote control.

As a result of the current crisis we now face, we have introduced a sanitary solution to address the need to protect yourself from these contaminants. Remotegards™ disposable protective remote-control sleeve covers are a single-use universal plastic sleeve that fits comfortably over most T. V., DVD, and stereo remote controls. It limits cross-contamination for every single use. These remote-control covers offer an easy-to-use protection that is inexpensive and easily convenient, with the "self-dispensing" hook. The self-dispensing hook can be easily displayed and vastly secure, with no secondary dispenser needed. The hooks permit for quick access and load each remote-control cover. Cleanliness and disinfection should be the highest priority during this pandemic. Remotegards™ disposable protective remote-control sleeve covers offer an additional safety measure all while maintaining high standards.

SEGMENTS

- Ideal for Hotels/Motels/Airbnb
- Hospital Rooms
- Fitness Centers
- Senior Citizen Care Facilities
- University and College areas/U Common Areas
- Public Libraries
- Elementary, Middle and High Schools

FEATURES AND BENEFITS

- Reduces cross contamination
- Single-Use
- Universal fit to any remote control
- Easy to apply and remove
- Protects the Remote-Control Surface against scratches and repairs
- Reduces cleaning time
- High Transparency
- Easy Self-Dispensing Hook
